

Azure Logic Apps Monitoring & Support Managed Services Agreement Offer

Between

Colosseum AG, Talstrasse 70, 8001 Zurich, Switzerland

and

Sonrisa Informatikai Kft, 1038 Budapest, Népfürdő u. 22., Hungary

Version: 1.0

Date: 19th August, 2025

Prepared by: Becze Szabolcs

Email: becze.szabolcs@sonrisa.hu

This document constitutes a **Managed Services Agreement** by and between **Colosseum AG** and **Sonrisa Informatikai Kft**. The document and pricing will remain valid for **30 calendar days** from the date of issuance, unless otherwise mutually agreed upon by both parties.

Executive Summary

Colosseum AG relies on **Azure Logic Apps** to support critical business processes and seamless data exchange with Microsoft Dynamics 365 and other systems. To ensure these workflows remain stable, efficient, and resilient, **Sonrisa Informatikai Kft.** proposes a **Managed Services** model focused on proactive monitoring, rapid issue resolution, and continuous optimization. This approach provides predictable operations, reduces the risk of disruptions, and safeguards Colosseum's business-critical integrations through a cost-effective, future-ready service framework.

Introduction

In our previous engagement, we supported Colosseum by conducting a comprehensive audit and optimization of the Azure Logic Apps supporting Dynamics 365 data exchange. That work improved reliability and helped address immediate challenges. Building on this foundation, we now propose a Managed Services model that ensures continuous monitoring, proactive diagnostics, and structured governance for these business-critical workflows.

The service will be delivered by a team of cloud engineers with mixed expertise, combining deep technical skills and operational experience. This team-based delivery model ensures continuity, resilience, and flexibility, avoiding reliance on any single resource. It allows Colosseum to benefit from shared expertise while maintaining predictable service levels.

Scope

The Managed Services agreement covers monitoring, diagnosis, and remediation activities for all in-scope Azure Logic Apps workflows. Our activities include:

- Continuous monitoring of workflows to detect anomalies and errors.
- Diagnostics and root cause analysis of failed or degraded executions.
- Monthly reporting of incidents, root causes, proposed solutions, and time/effort estimates.
- Incident handling, with quick fixes (≤ 30 minutes, such as restarts or minor configuration corrections) included in the fixed fee.
- More extensive interventions billed as **Time & Material items at a daily rate of 546 EUR (exclusive of taxes)** under this same agreement.

Out of Scope

Major redesigns, significant architecture changes, new workflow development, and third-party integrations outside the current environment are not included in the scope of this Managed Services package.

Managed Services

Support Resources

Technical Account Manager

The **Technical Account Manager (TAM)** will serve as the primary point of contact for Colosseum within the scope of this Managed Services Agreement. Acting as both an advisor and coordinator, the TAM will provide oversight across operational, strategic, and architectural matters to ensure the service aligns with Colosseum's business objectives. The TAM will regularly engage with Colosseum's IT team through scheduled meetings, status reviews, and performance discussions, ensuring transparency and alignment on all activities. In addition, the TAM will manage the team of Support Engineers delivering the day-to-day services, and will act as the primary escalation point for both Sonrisa's engineers and Colosseum's stakeholders.

Service Manager

The **Service Manager** will be responsible for the overall quality and consistency of the Managed Services delivered to Colosseum. This role ensures that agreed service levels are met, oversees reporting and compliance, and drives continuous improvement of the service. The Service Manager will also facilitate monthly service reviews, addressing any concerns and ensuring corrective actions are implemented where necessary.

Support Engineers

Support Engineers provide day-to-day technical support for Colosseum's Azure Logic Apps during standard service hours (5/8). They act as first responders to monitoring alerts and incident reports, performing diagnostics and quick fixes within the agreed service scope. When issues require escalation, they work closely with the Technical Account Manager to coordinate resolution and ensure timely communication.

Support Approach

Incidents are handled through a clear process that ensures fast response, transparent communication, and documented closure. Each step defines who is responsible and how progress is reported.

- **Detection & Logging** – Incidents are identified via monitoring or reported by Colosseum, then logged and categorized.
- **Initial Response** – Support Engineers act as first responders, acknowledge the issue, and perform a quick assessment.
- **Resolution Path**
 - Quick fixes (≤ 30 minutes) are resolved directly.
 - More complex issues are escalated to the TAM, who coordinates resources and communicates next steps.
- **Escalation & Oversight** – The TAM manages escalations; the Service Manager becomes involved for recurring or systemic issues.
- **Closure & Reporting** – Once resolved, incidents are validated, documented, and included in the monthly service report.

This approach ensures that every incident is tracked from detection to closure, with clear accountability at each stage.

Service Levels

Coverage hours

Support services are provided during standard business hours, **Monday to Friday, 8:00 AM – 5:00 PM PST**. Within this service window, all incidents will be acknowledged and addressed with a **maximum response time of four (4) hours**.

Service Limitations

Any impact to the delivery of service levels or performance indicators that occurs outside of Sonrisa's control or responsibility will not be considered in determining Response Time or Resolution Time. Such situations include, but are not limited to:

- Customer-initiated outages, changes, or impacts in peripheral systems or domains.
- Mutually agreed maintenance windows or scheduled activities that temporarily affect service availability.

- Failures in Customer's network connectivity, identity management, or security configurations that prevent Sonrisa from accessing the Azure Logic Apps environment.
- Software or platform defects within Microsoft Azure or Dynamics 365 that require resolution by Microsoft.
- Delays caused by interoperability issues with unsupported or third-party systems and vendors.
- Force Majeure events as defined in the Agreement.
- Any situation where Sonrisa is awaiting a specific action, approval, or response from the Customer that prevents timely resolution.

Scope Management and Change Control

To maintain transparency and accountability, a formal **Change Control process** will be used to manage all changes to this Managed Services Agreement. This process ensures that any modification to scope, services, or responsibilities is properly reviewed, documented, and approved by both Colosseum and Sonrisa before implementation.

The Change Control process applies in particular when:

- **New workflows** are introduced into Colosseum's Azure Logic Apps environment that require monitoring, support, or incident handling.
- Existing workflows are significantly modified in ways that increase their **complexity or support requirements**.
- Adjustments are requested to service levels, operating hours, or roles and responsibilities under this Agreement.

When a potential change is identified, either party may initiate a **Change Request**. This will include the reason for the change, the expected benefits and impacts, and any additional resources, time, or costs required. Sonrisa will review and validate the request, and both parties must agree in writing before the change becomes effective.

Approved changes may result in adjustments to the number of supported workflows, the overall service fee, or the duration of the Agreement. All such adjustments will be communicated transparently and confirmed through a formal **Change Order**.

5. Pricing Model

Our pricing model is based on the number and complexity of workflows under management, combined with a fixed account management fee.

Cost Matrix

Description	Quantity	Unit Price (EUR / Month)	Monthly Total (EUR)
Simple Workflows	43	35	1,505
Moderate Workflows	5	50	250
Advanced Workflows	3	65	195
Total Monthly Fee			1,950

Annual Commitment and Discount

Clients committing for 12 months receive a 3% discount, calculated on the monthly service fee. The discount will be accumulated over the contract period and applied in full as a credit on the final (12th month) invoice.

Additional Terms

- All prices are exclusive of applicable taxes.
- Work requiring more than 30 minutes of effort is billed as **Time & Material at an hourly rate 68.25 EUR** under this agreement.
